

The animals

Keeping food of any kind in the bungalows will attract unwanted guests such as lizards, squirrels and other rodents as well as ants. The reality of our world is that being at one with and accepting nature and all the life that it includes can only work when it is done with wisdom and knowledge of nature.

Monitor Lizards – These lizards can grow very large. They will only ever attack when absolutely cornered beyond escape and will otherwise run. The larger ones will not run however and instead will stand their ground and use their large tail as a whip to scare you away. If they get too frustrated they will spray a poisonous liquid but this only happens when they get really annoyed and it is difficult to get them that angry. However trying to get them this angry is definitely not advised.

Horbill Birds – These large and beautiful birds are very peaceful and shy creatures and have become the icon and symbol of Bulone. You will most likely see them when they come to eat the fruit of the tree on the beach side of the restaurant. If you have a good zoom on your camera you will get a good shot of them but if you try to get too close they will likely flee.

little Lizards – These small lizards are varied in species and run around the flat grassy areas and disappear into holes that they burrow. The only way you will get a photo of them is if you have a camera with a long lens.
